- Lifespan Health Promotion & Prevention of Age Related Frailty and Disease
- Replicating and tutoring integrated care for chronic diseases
- Development of interoperable independent living solutions
- Innovation for age friendly buildings, cities and environments

Learn more about the different areas [here](#)

Our major topic is...

...Styria is the first and only Austrian reference site for active and healthy ageing within the "European Innovation Partnership (EIP) on Active and Healthy Ageing (AHA)". The Styrian reference region for "Active and Healthy Aging" unites an ecosystem of more than 30 stakeholders from science, industry, politics and the population.

The HTS links the ecosystem between business, science, research and politics to generate economic growth and social added value.

Especially in the development of innovative solutions and services and in the area of digitalization, opportunities for companies and research institutions to set new European standards for improving health care are possible.

Who we are & what we believe in..

...increasing the quality of life for older people and securing our health system in the long term despite an aging society.
